

Sun Assessment

- 1) Make 12 copies of your property survey or a roughly drawn map of your property.
- 2) On a day when you are home all day, wake up with the sun and set an alarm on your phone for every hour.
- 3) When your alarm goes off, walk your property and mark the sunlight on your map with a highlighter
 - a) Repeat this every hour until dark

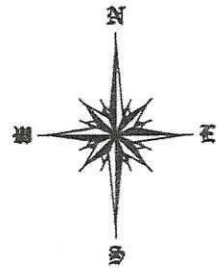

Once you are finished with your assessment, you will have a concrete answer as to how many hours of sun a prospective planting area receives during the hottest time of the year! This is very important, because our heat is what makes or breaks plants in Alabama. Morning sun is much different than afternoon sun. Having this information is an integral part of choosing the right plant for the right spot!
